

① what are comments and what is the importance of commenting in any code?

A comment is text in a program's code, script, or another file that is not meant to be seen by the user running the program. However, it is seen when viewing the source code. Comments help make code easier to understand by explaining what is happening and help prevent portions of a program from executing.

② what is call statement and when do you use this statement?

use the call statement to transfer program control from the calling program to an external subroutine or program that has been compiled and cataloged. Locally cataloged subroutines can be called directly. Specify name the exact name under which it was cataloged.

② how do we compile a code in VBA?

You can compile your VBA code by clicking debug menu → compile VBA project. A compile error for a missing "end if" part of an if statement. Every individual line in the code is correct but together they don't represent a complete if statement.

① No error control, little reusability, problematic scalability, low coverage of data operations, lack of automation.

③ what are hotkeys?

A hot key is a key or a combination of keys on a computer keyboard that, when pressed at one time, performs a task more quickly than by using a mouse or other input device.

how can you create your own hot keys?  
mm mm mm mm mmmmm

① Right click the desired icon

② At the bottom of the drop-down menu, above "unpin",

right click the name of the program.
